

Upcoming Trail Closure:

The Perkiomen Trail, stretching from Harmon Road to Salford Street in Upper Salford Township, will be closed for five to ten days starting around January 10th. The trail closure is for the installation of a public waterline along the trail to serve residents with wells contaminated by volatile organic compounds (VOCs). EPA is working closely with Montgomery County to ensure the completion of this work along the trail. Upper Salford Township, Lower Frederick Township, and the Schwenksville Water Authority are coordinating with EPA on the waterline work. The trail will be closed weekdays from approximately 7:00 a.m. to 5:00 p.m. during this period of construction. The map displayed below shows the closed off section of the Perkiomen Trail highlighted in yellow.

Baghurst Drive Superfund Site

Community Update

Upper Salford Township, Pennsylvania

January 2022

Site Background:

The site consists of a groundwater plume contaminated with VOCs. The plume affects a small community of single family homes, a sizable number of which draw their water from a community well. A water pipeline is being constructed to allow residents affected by the VOC contamination access to clean water.
